

Business Sales Performance Analytics Report

Introduction

This report presents a comprehensive analysis of business sales data to identify key trends, top-performing products, and overall business performance. The analysis was conducted using Python for data processing and Power BI for interactive dashboard visualization.

Objectives

- 1 Analyze revenue trends over time
- 2 Identify top-performing products
- 3 Evaluate customer purchasing behavior
- 4 Assess delivery and payment performance
- 5 Provide actionable business insights

Tools & Technologies Used

- 1 Python (Pandas, NumPy, Matplotlib, Seaborn)
- 2 Power BI for dashboard visualization
- 3 CSV dataset for sales data

Analysis Summary

The dataset was cleaned and processed by handling missing values and converting date formats. A new revenue column was created to calculate total sales. Various analyses were performed, including revenue trends, product performance, and monthly sales patterns.

Key Insights

- 1 Revenue shows noticeable variation over time, indicating seasonal or demand-based trends.
- 2 A small number of products contribute to a large portion of total revenue.
- 3 Monthly analysis reveals fluctuations that can help in forecasting future sales.
- 4 Certain payment methods are preferred by customers, indicating behavioral patterns.
- 5 Delivery status impacts customer satisfaction and operational efficiency.

Business Recommendations

- 1 Focus marketing efforts on top-performing products to maximize revenue.
- 2 Optimize inventory based on monthly sales trends.
- 3 Encourage use of popular payment methods to enhance user experience.
- 4 Improve delivery processes to ensure timely and successful deliveries.
- 5 Leverage data insights for strategic business decision-making.

Conclusion

This project demonstrates the application of data analytics techniques to solve real-world business problems. By combining Python for data analysis and Power BI for visualization, meaningful

insights were generated to support business growth and decision-making.
